MAM PROFESSOR ACADEMIC PLATFORM

Complete Production Codebase & Architecture Reference

Platform: Kurdish Academic Research, Writing & Editorial Platform

Architecture: Angular 20 Zoneless, TypeScript Strict, Node/Express, Tailwind CSS 4

Included Files: 636 Complete Source Files

Build Timestamp: 2026-11-05 20:23:53 UTC

Integrations: Gemini 2.5 AI SDK, Firebase Firestore, Cloud SQL, Workspace APIs

---

TABLE OF ARCHITECTURAL MODULES:

1. Core Application Shell: src/app/ (Root, Shell, Header, Controller, Router, State)

2. Advanced Research Engine: src/app/features/advanced-research/ (Toulmin, Synthesis, Agents)

3. Academic Suite Tools: src/app/features/ (Harvard, Plagiarism, Defense, Methods Lab)

4. Kurdish Digital Library: src/services/kurdish-books-catalog.ts & 40 scholarly archives

5. Backend API Services: src/server/ (Express Routes, Gemini SDK, Security, Embeddings)

6. Verification Gates: scripts/ (Anti-hallucination audits, Line limits, Smoke tests)

| 19 | Security, accessibility, and performance | Recheck auth boundaries, SSRF, rate limits, secrets,...
| 20 | Release certification | Require current-head CI, release verification artifact, dependency risk...

## Shared quality gates

- Keep every modified source file under 500 lines; split modules instead of expanding oversized compon...
- Do not update dependencies as incidental cleanup; review lockfile and advisories separately.
- Do not claim external-provider, database, deployment, or manual end-to-end success from static check...
- Run the repository's CI regression suite on the pull request; merge only if the exact head SHA is cu...
- Keep known blockers visible. A blocked gate is a useful result, not a reason to bypass verification.
```

FILE [18/636]: docs/roadmap/PHASE_10_CITATION_STYLE_FIDELITY.md (22 lines)

```
# Phase 10   Citation Style Fidelity

## Changes

- Add distinct formatting paths for APA 7, MLA 9, Chicago Author Date, Chicago Notes Bibliography, Har...
- Format author names using style-oriented family-name/initial conventions where full names are supplied.
- Format journal metadata (journal, volume, issue, pages, DOI) when available; do not invent missing f...
- Provide Chicago NB superscript note markers and footnote text; number IEEE references consistently b...
- Reject unsupported runtime styles rather than silently formatting them as APA.
- Add metadata warnings and style-specific regression coverage to CI.

## Acceptance criteria

1. All six supported styles produce distinct in-text/reference formats.
2. IEEE numbers remain stable for repeated uses of the same source.
3. Chicago NB emits note markers and footnote text instead of IEEE-style bracket markers.
4. Evidence eligibility checks remain mandatory before a citation can be returned as verified.
5. Missing metadata is disclosed rather than fabricated.

## Limitations

This is a best-effort renderer because current source records may not contain every field required by ...
```

FILE [19/636]: docs/roadmap/PHASE_11_ACADEMIC_WRITING_GUARDRAILS.md (21 lines)

```
# Phase 11   Academic Writing Pipeline Guardrails

## Changes

- Treat topic and discipline as bounded, normalized user data and short-circuit invalid or overlong in...
- Never return model-generated `evidenceQuotes` from a planner that receives no verified source records.
- Bound model output lengths and list sizes, trim blank entries, and return an explicitly degraded dra...
- Keep research question, thesis statement, and conclusion framed as proposals, not verified findings.
- Add offline mocked regression tests and include the writing-engine spec in CI.

## Acceptance criteria

1. No generated quote, statistic, DOI, or citation is surfaced as evidence by this planner.
2. Inputs above configured limits do not reach the model.
3. Model output lists and long strings are bounded.
4. Degraded output is marked `status: 'degraded'` and makes no evidence-verification claim.
5. No new dependencies; modified source and spec files remain below 500 lines.

## Limitations

This planner still produces candidate academic structure and prose. It does not replace source retriev...

FILE [20/636]: docs/roadmap/PHASE_12_KURDISH_ACADEMIC_QA.md (21 lines)

```
# Phase 12   Kurdish Academic Language QA

## Changes

- Normalize and bound source text before model calls; blank or overlong text returns a degraded respon...
- Protect citation markers, author-date citations, DOI, URLs, ISBN/ISSN, dates, percentages, and numer...
- Discard rewrites that change protected content and return the original text without a score or appro...
- Accept scores only when finite and within 0 100; malformed issue objects are filtered against a type...
- Add offline mocked regression coverage and register this spec in CI.

## Acceptance criteria

1. Citation/identifier/date/numeric fragments remain unchanged with the same occurrence count.
2. Any protected-fragment mismatch fails closed to the original input.
3. Missing or invalid scores become null and do not grant model approval.
4. Oversized input is not sent to the model.
5. No new dependencies; source and spec stay below 500 lines.

## Limitations

Protected-token checks do not prove semantic equivalence or grammatical correctness. Scores and issue ...

4. **Database integration proof:** migrate a clean PostgreSQL database and verify real persistence.
5. **Evidence truthfulness:** distinguish source identity, exact text match, semantic support, and hum...
6. **Deployment checklist:** validate actual secret injection, database access, CORS origin, startup, ...

### P1 — academic and research reliability

7. Source/provider contract tests and metadata conflict handling.
8. Citation-style golden tests and claim-to-passage traceability.
9. RAG provenance, graph consistency, and cross-user isolation.
10. Real-data statistical validation and multi-agent failure/budget tests.
11. Manuscript/publication lifecycle integration tests and auditable revisions.

### P2 — user-facing quality
```

```
12. Sorani RTL and mobile E2E review, accessibility, performance, and terminology review.

## Definition of done

A matrix item can be marked **done** only when all conditions below are met:

- Implementation is committed on a reviewable branch and all changed source files comply with the repo...
- A deterministic automated check exists for the behavior or risk.
- CI passes on the exact commit being reviewed.
- Security- or research-sensitive behavior has negative tests, not only a successful-path demo.
- Any external dependency is either exercised against a controlled integration environment or clearly ...
- UI/API wording does not claim more certainty than the evidence supports.
- Deployment-only requirements are explicitly separated from code/CI status.

## Known limitations of this assessment

- This is a repository/configuration review; it does not have the production secret values and does no...
- The current CI workflow runs dependency installation, release readiness, line limits, static academi...
- Static checks can miss behavioral bugs and can also flag patterns without understanding all context....
- The prior `npm ci` output reported 19 advisories (2 critical, 11 high, 6 moderate); re-run the detai...
- A green build is not equivalent to a production security certification or proof that every AI-genera...

## Immediate next phase

Phase 3 should preserve the known-good baseline while changes are made: establish the merge-commit CI ...
